UTHEJ MOPATHI

Senior Software Engineer - iOS | Swift | AI Integrated Enterprise Solutions | Test Automation

5305375039 • mopathiuthej4@gmail.com • https://www.linkedin.com/in/uthejm/ • https://github.com/Uthejmopathi • Austin, Texas

Summary

Senior iOS Developer with 6+ years of experience building enterprise mobile applications at PayPal, T-Mobile, Citibank, Empower. Specialized in architecting scalable iOS solutions, optimizing payment systems and applications with AI/ML integration, and leading cross-functional teams to deliver high-performance mobile experiences powered by machine learning insights and predictive analytics.

Key Achievements

Payment Conversion Boost

Boosted payment conversion by 20% via optimized App Switch feature at PayPal.

4M additional payments per day

Optimized App Switch feature, reducing latency by 60% using Insights from DataDog and FPTI

Next-gen iOS architecture

Founding architecture for PayPal's next-generation mobile platform using Bazel.

Feature Implementation Lead

Led a team to implement 100+ new features on Citibank's wealth dashboard.

Leveraged AI and ML models

Analyze user behavior patterns, optimizing payment flows and measurable business impact.

QA Automation Efficiency

Automated 200+ test cases, reducing QA time by 30% using BDD scripts.

Experience

PayPal — Austin, United States

Senior Software Engineer — 2025 - Present

- Architected and developed PayPal's App Switch payment feature with AI-powered fraud detection integration, enabling cross-application payment processing, for merchant integrations, reducing checkout friction and improving conversion rates across partner applications.
- Led Observability initiative implementing comprehensive telemetry with DataDog and FPTI Lighthouse, applying machine learning models to analyze user behavior patterns and optimize payment flows, driving nearly million+ additional Payments Per Day (PPPD).
- Designed end-to-end CI/CD pipeline using Harness, BrowserStack, and Appium with DataDog ML-powered analytics dashboard, enabling real-time test metrics visualization and predictive quality assurance on every Pull Request.
- Optimized performance by 60% (7-8s to 2.8-3.2s) using ML-driven predictive analytics and machine learning insights from DataDog and FPTI Lighthouse.
- Managed production releases for 4 iOS repositories while leading cross-functional teams to maintain 99.9% uptime. Utilized ML-based predictive monitoring to proactively identify and prevent production issues in enterprise payment systems.

T-Mobile — Dallas, United States

Software Engineer II - iOS — 11/2023 - 02/2025

- Led the development and maintenance of 8 in-store T-Mobile applications which are integrated as cocoa pods dedicated to managing customer personal details and account-related information serving as the primary point of contact between the internal team and higher organizational levels.
- Implemented a systematic organization of modules, resulting in a 30% reduction in bugs each release, enhancing code readability and overall software quality and timely deliverables of pod versions.

Globant - Client: Citibank — Dallas, TX

Software Developer — 01/2021 - 09/2023

- Responsible for Developing Citibank's user facing iOS Application's Wealth Dashboard using Objective C, Xcode, Swift, Swift UI, Instruments, Cocoa touch.
- Enabled tagging based on user interaction using Adobe analytics that displays real time usage of app features and buttons clicked, features viewed.
- Utilized Postman in the process integration of network calls and consuming response in MVVM Design Architecture and utilized Adobe Analytics and Splunk.
- Optimized codebase efficiency by addressing code duplicity, reducing app size by converting Xibs to Programmatic UI and enhancing code coverage.

SM Logics — Chicago, IL

Software Developer — 04/2020 - 01/2021

- Responsible for the development of iOS Mobile Application's Search Feature on Swift and Xcode, perform unit testing using Apple's XCTest Framework.

University of California, Irvine — Irvine, CA

Research Intern — 05/2016 - 08/2016

- Tech Stack - Python, Google Vision API, TensorFlow, MySQL
- Developed an application as part of a team that identified user's interests by analyzing images available in their Google Photos
- The application automatically identifies the objects in user's google photos using Vision API and suggests custom places of interests

Career Stack

iOS, Swift, SwiftUI, Xcode, Cocoa, Generative AI, Harness, DataDog, FPTI, ML Prediction, AI Integration, Adobe Analytics, Splunk, REST APIs, Automation, iOS Architecture, Java, Bazel, Gherkin, Javascript, TypeScript, Enterprise Distribution, Jenkins, Postman, Visual Studio.
